

Deliverables For this Task, you need to hand in your experimental design.

Below is a sample experimental design. It includes the following information:

- a) for each factor – factor name, which levels, kind of factor (between subjects or within subjects)
- b) for the table – factors, level names, sample size for each condition. For now, estimate that you'll need 15 participants in each condition. The arrangement of the table shows whether you will test each factor between subjects or within subjects.
- c) for the design – how many experimental conditions, how many participants total

Sample:

		Time Limit (between-subjects)	
		No Limit	Time Limit
TV Exposure (between-subjects)	No TV	<i>No limit; no TV n = 15</i>	<i>Time limit; no TV n = 15</i>
	With TV	<i>No limit; with TV n = 15</i>	<i>Time limit; with TV n = 15</i>

Total: 4 experimental conditions, N = 60 participants
